## 6AR-FSE FUEL FUEL SYSTEM DETAILS FUEL INJECTOR (FOR PORT INJECTION)

### CONSTRUCTION

- a. A high-atomization 12-hole long nozzle fuel injector assembly is used. Through the adoption of a long nozzle type injector, airflow in the intake port is optimized and the amount of fuel adhesion is reduced, contributing to higher fuel efficiency and reduced emissions.
- b. Moving parts and magnetic circuits have been optimized to realize an expanded dynamic range of the fuel injection volume and excellent high temperature characteristics, contributing to higher fuel efficiency and reduced emissions.
